Students Club Management System

Introduction

The Student Management System is a web-based application designed to streamline and automate the management of student-related data for educational institutions. This project integrates SQL for robust database management, HTML for structuring the user interface, and CSS for enhancing the visual appeal and responsiveness of the application. The system aims to provide an efficient, user-friendly platform for administrators, teachers, and students to seamlessly manage and access critical information such as student records, attendance, grades, and course details.

Scope

The Centralized Student Club Management System facilitates student registration, membership recruitment, event organization, member tracking etc. Students register for clubs (one-to-many relationships) and can participate in many club events (many-to-many). Events are linked to clubs and members (ternary relationship) . The system supports composite attributes such as member full name (first, middle, last), multivalued attributes such as member mobile, and derived attributes like age. The club structure follows generalization/specialization, where a user member may be further classified as a club lead or general member. Also, there is a role of leads as executive members Later, we used a ternary relationship between user, club, and recruitment.

Entities

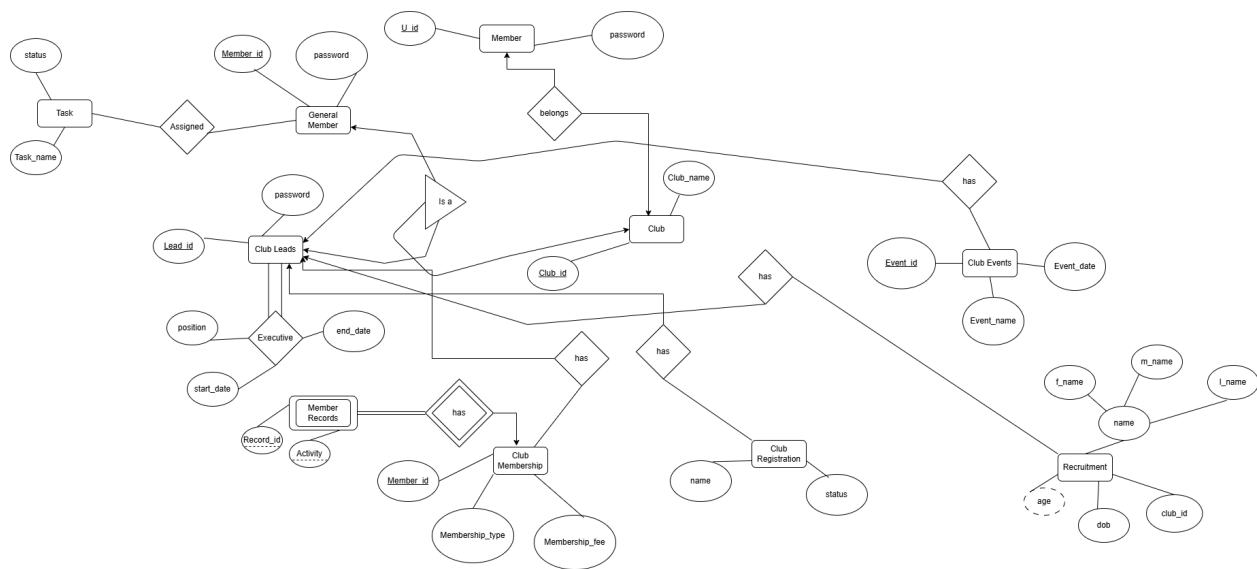

Strong Entities

- Member - login page
- Club - entity representing student clubs
- Club Leads - club lead login page, where leads can oversee things
- General Members - another login page, where they will only be able to see the club tasks
- Club Events - Stores details of scheduled club activities.
- Recruitment - Used in recruiting students
- Club Registration - Tracks registration
- Club Membership - tracks membership details.
- Task- general member can use it to track their tasks

Weak Entities

- Member Records- it records the data of club membership if there member is added

Final ERD

Relationships and ERD Concepts

1. One to One Relationship-

- Member with Club: Member can sign in for a club only

2. One to Many Relationship-

- Club Leads with Club Membership: One user track about many memberships
- Club Leads with Club Events: A club lead can track many club events
- Club Leads with Recruitment: A club can recruit many.
- Club Leads with Club Registration: Each club has a single registration records

3. Many to Many Relationship-

- General Member with Task: The member can track many kind of tasks

4. Generalization Relationship-

- Club, General Member, Club Leads. There is a specialized connection between the Club and its subclasses.

5. Role-

- Club Leads will also play a role as an executive member

Composite Attributes:

- Recruitment: Name(f_name,m_name,l_name)

Multivalued Attributes:

- Recruitment: Mobile

Derived Attributes:

- Recruitment: Age(Will be derived from dob)

Schema

Member (U-id, password)

Club (Club-id, Club_name, U_id)

Club Leads (Lead_id, Password, Club_id)

Executive Members (Club_id, Lead_id, position, start_date, end_date)

General Member (Member_id, password, Club_id)

Club Events (Event_id, Event_date, Event Name, Lead_id)

Participate (U-id, Event_id)

Recruitment (new_club_id, f_name, m_name, l_name, dob, Lead_id)

Recruitment_mobile (mobile)

Club Registration (Reg_date, Status, Lead_id)

Member Records (**Record_id**, **Activity**, **Lead_id**)

Club Membership (**Member_id**, Membership type, Membership Fee, **Lead_id**)

Task(name, status)

Assigned(**member_id**)

SQL DDL

The Centralized Student Club Management System employs a MySQL relational database to manage user authentication, club operations, event scheduling, and membership tracking. The database schema consists of ten tables that support core functionalities, such as user login (member table), club management (club), and event planning (club_events).

- Member: Stores user credentials (U_id, password) for login, integrated with the system's login form.
- Club: Manages club information (club_id, club_name).
- club_events: Schedules events (Event_id, Event_name, Event_date).
- club_leads and general_member: Handle credentials for leaders and members.
- Executive: Tracks leadership roles (Position, Name, Start_date, End_date).
- club_membership, club_registration, member_records, recruitment: Support membership fees, registration status, member activities, and recruitment details.

Functionalities

Password for different pages

For Central Login

Id- 123 and password- 123

For General Member login

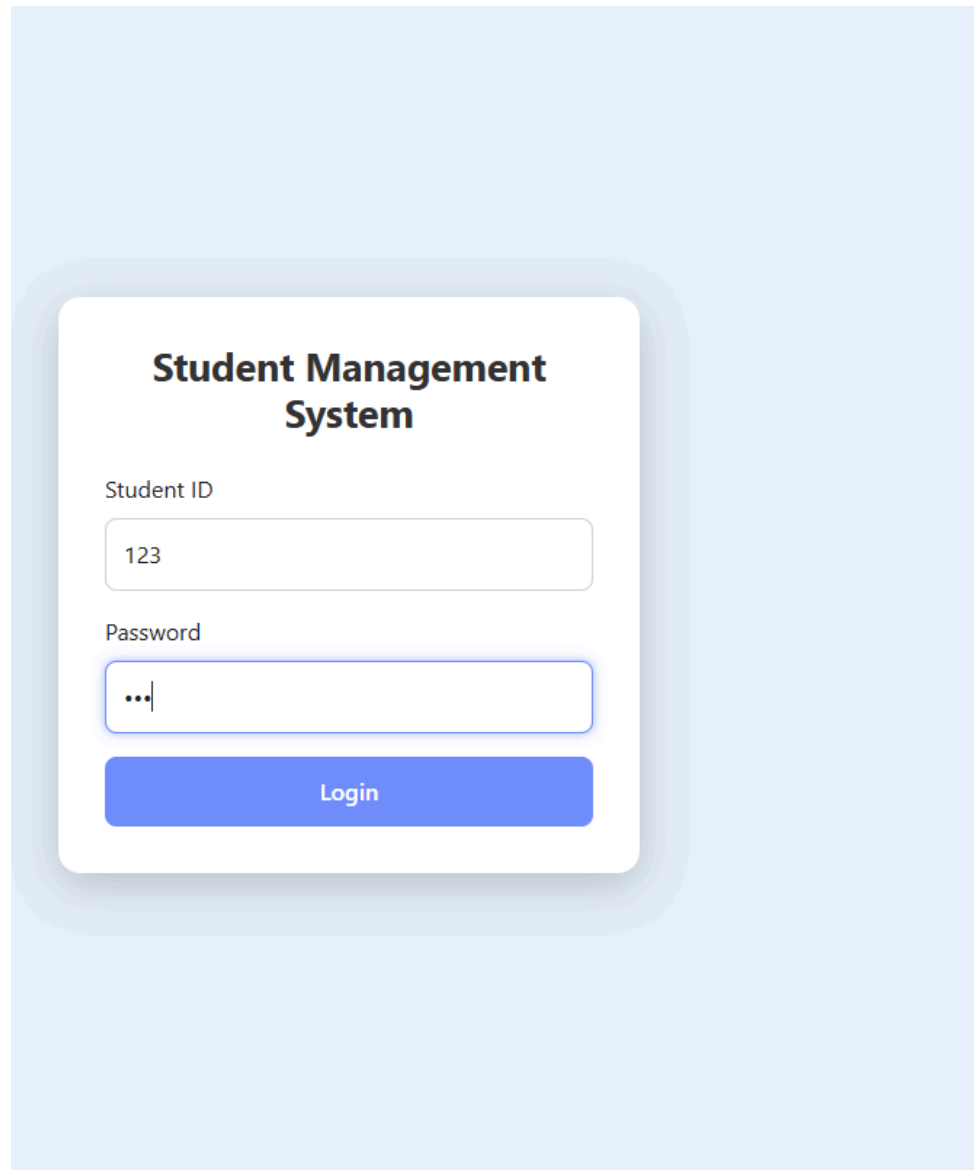

Id- member123 and password- pass456

For Club Leads login

Id- 1 and password- ABC

Procedure

1. At first, you have to log in centrally, where ID and pass are 123. If the password or ID does not match, it shows an error

A login form for the 'Student Management System' is centered on a light blue background. The form is a white rounded rectangle with a subtle drop shadow. It features the title 'Student Management System' in bold black text. Below the title are two input fields: 'Student ID' containing the text '123' and 'Password' containing three dots '...'. A blue 'Login' button is positioned at the bottom of the form.

Technology Used-

1. Html
2. CSS
3. Bootstrap
4. Php
5. Sql

11. Lastly, we can add or delete any club event from this interface

The screenshot displays a web application titled "Club Events". At the top, there is a form to add a new event, consisting of an "Event Name" input field, a date input field with the placeholder "mm/dd/yyyy" and a calendar icon, and a green "Add Event" button. Below this form is a list of five existing events, each displayed in a light blue rounded rectangle. Each event entry includes its ID, name, date, and a red "Delete" button. The events are as follows:

Event ID	Event Name	Event Date
1	Ski Adventure	2025-06-12
2	MS Word Basic Skill	2025-07-19
3	Typography	2025-08-03
4	Basic Video Editing	2025-09-15
5	Higher Studies	2025-10-27

At the bottom of the interface, there is a prominent red "Logout" button and a timestamp indicating the current date and time: "April 12, 2025 at 12:56:58 PM".

Hosting Information

We have hosted it in our local host with <http://localhost/Project/Index.php> on our computer

Conclusion

By guaranteeing smooth club registration, event planning, and financial monitoring, the Centralized Student Club Management System streamlines the administration of student organizations. The system guarantees flexibility and scalability by utilizing database design principles, including relationships, strong and weak entities, and role-based specialization. Students will have a more structured and welcoming club experience due to future integration, which will improve engagement and operational efficiency.
